

Reservoir Group introduces the INFOCOIL System which is capable of providing real-time data during well intervention operations. The system is highly beneficial for ultimate job performance and success by delivering "live" downhole internal and external pressures, tension / compression, and temperature data along with a casing collar locator (CCL) for accurate depth control. The system includes a surface equipment package, downhole tools, and 1/8" Tubing Encapsulated Cable (TEC).

Features	Benefits
Ball-drop disconnect/ Ball pass-through	Delivers real-time data for optimization and decision making
TEC line downhole anchor/shear sub	Improves operational performance and success
Suitable for on-shore and off-shore operations	Provides immediate intervention feedback and confirmation
Capable of GO Pin connection for logging tools / video camera	Improves efficiency and safety

Specifications		
	Imperial	Metric
Pressure	10,000 psi	69 MPa
Tension	40,000 lbf	18,000 daN
Torque	400 ft.lb	540 N.m
Temperature	300° F	150° C

Specifications subject to change.

Case histories are available upon request.

**Intelligent Well Intervention
Technology for
Demanding Applications**

- Milling
- Fishing
- Perforating

- Inflatable/packer setting
- Fluid treatment (acid/chemical)
- Supports most wireline and camera tools

INFOCOIL System 2-1/8" Bottom Hole Assemblies

TEC Cutter

Anchors and seals TEC line and provides cut function

Cablehead

Standard coiled tubing functions

Termination Sub

Crossover to standard thread

GO Pin Adapter

Connection to logging tools

InfoSub

Sensor Package
